Week 1 Discussion: Introductions

Hello everyone! I am pursuing a supply chain management degree and am keenly interested in how technology optimizes our field. Before joining this course, I completed internships at logistics companies, where I was fascinated by the integration of AI and data analytics in streamlining operations. My academic journey has been driven by a desire to blend technical insights with supply chain strategies, aiming to innovate and improve efficiency in supply chains. I am excited to learn more and share insights with all of you!

I chose the SCMG course to deepen my understanding of how cutting-edge technologies, like blockchain and IoT, can revolutionize supply chains. My goal is to acquire practical skills in these technologies and learn to apply theoretical concepts in real-world settings, ultimately enhancing efficiency and sustainability in supply chain operations.

My interests lie at the intersection of data analytics and sustainable practices within supply chains. I am particularly captivated by how blockchain technology and artificial intelligence can create more transparent, efficient, and sustainable supply networks. Exploring these areas further and understanding their practical applications in real-world supply chains are what I look forward to the most.

By the end of this course, I aim to master the practical application of blockchain and AI in supply chains, from enhancing transparency to optimizing logistics. I plan to leverage these skills to propose innovative solutions in my future career, aiming for roles focusing on improving supply chain sustainability and efficiency through technology.
