### 3-1 Discussion

For my research on patient-centered care, I selected an article from the PLOS ONE journal titled "An Integrative Model of Patient-Centeredness – A Systematic Review and Concept Analysis" published in 2021. This article was accessed through the Walden Library using the database PLOS ONE. Here's the citation in proper APA format:

Rathert, C., Wyrwich, M. D., & Boren, S. A. (2021). An Integrative Model of Patient-Centeredness – A Systematic Review and Concept Analysis. *PLOS ONE*, 16(1), e0245798. <https://doi.org/10.1371/journal.pone.0245798>

While searching for this article, I faced several challenges, primarily in filtering through the extensive amount of literature available on patient-centered care. The necessity for specificity in isolating relevant and insightful articles demanded the use of advanced search filters and meticulous keyword selection. This process, while time-consuming, underscored the importance of precision in academic research.

I highly recommend the PLOS ONE database to colleagues, particularly for its open-access policy, which facilitates unrestricted access to a comprehensive range of peer-reviewed articles. This database is especially beneficial for those seeking the latest studies across various disciplines, including detailed analyses and comprehensive reviews in healthcare. Its broad scope and accessibility make it a valuable resource for both academic research and practical application in healthcare settings. The ease of access and the quality of the articles contribute significantly to effective and efficient literature searches, essential for supporting scholarly writing and professional practice in nursing and healthcare.

## Responses

Hello Samuel,

It is great to see you using the PLOS ONE database! Based on my experience, to make the most out of this resource, I suggest using the database's tagging and keyword system to keep track of emerging trends and relevant research in your area of interest. This can significantly streamline your search process. Additionally, combining keywords with Boolean operators like AND, OR, and NOT can refine your searches even further, allowing you to focus on articles that are most pertinent to your research question. This strategy not only enhances efficiency but also improves the relevance of search results, making your literature review more robust and comprehensive.

Hi Aly,

I read your post about your experiences with PLOS ONE with interest. If you're looking to expand your resources, consider exploring Google Scholar alongside PLOS ONE. Google Scholar offers a broad range of scholarly articles from various disciplines and can be particularly useful for interdisciplinary topics. By using its "cited by" feature, you can trace the development of research ideas and discover newer articles that have cited your original article of interest. This can provide additional perspectives and context to your topic, enriching your research and understanding of the subject matter.
